VERO VELLINI – QUALITY, FUNCTION AND GOOD LOOKS

For over a decade, Vero Vellini has been producing some of the finest hunting slings and straps in the industry. Using only top grade components and construction methods, Vero Vellini has helped hunters carry the load in every condition imaginable.

Pioneers of the neoprene sling, Vero Vellini sets itself apart with its three-layer Air-Cushion neoprene sandwiching that makes a sling that comfortable, but not excessively bouncy. The neoprene, combined with other flexible materials, means a sling that will stretch slightly with every step and absorb the shock generated by walking or hiking.

All materials used in Vero Vellini products are UV and IR light resistant, weather and temperature proof and designed to handle the worst hunting conditions and still look great back at the lodge.

While most slings or binocular straps/harnesses are purchased as an afterthought with concern given only to what looks good on the rifle, Vero Vellini offers a full line of products that not only look good, but also perform exceptionally well. Sometimes it's the little things that can have a huge impact on the hunt. Being able to carry your rifle or binocular in comfort, while still have quick access to it can make the difference between a successful day and a long, unproductive hike.

The Vero Vellini line includes a full range of rifle and shotgun slings and binocular straps and harnesses designed to meet any hunter's preference and taste. Every Vero Vellini sling features leather end panels for a classic look and non-slip rubber backing for a superior carry. From Wide-Top Rifle slings to Tactical and Shotgun slings, from binocular and camera straps to the Bino-Pal™ binocular harness, Vero Vellini takes European craftsmanship and combines it with modern materials to achieve the ultimate in balance, comfort, flexibility and dampening.
